Requetes Sql

i assuming that i build only the databases for EURO 2016. that wy i don't have year of participation in my models

The stadiums and their capacity where EURO cup 2016 was played.
select stadiumName , stadiumcapacity from stadium;

To know the number countries participated in the EURO cup 2016
select count(*) from team

the number of matches that ended with a win

```
select count(*) from match where finalresult = “WIN”
```

the number of matches that ended with a draw

```
select count(*) from match where finalresult=”DRAW”
```

the total number of players replaced in the tournament

```
select count(distinct playerid) from can_belongsMatch where isreplace = 1;
```

the total number of players replaced within normal time of play

```
select count(distinct playerid) from can_belongsMatch where isreplace = 1 and periodreplacement in
(“firsthalf”,”secondhalf”);
```

the total number of players replaced in the first half of play

```
select count(distinct playerid) from can_belongsMatch where isreplace = 1 and periodreplacement = “firsthalf”
```

the number of booking in the form of yellow cards

```
select sum(yellowCard) from match;
```

the number of booking in the form of red cards

```
select sum(redCard) from match;
```

all matches that had a red card booking

```
select * from match where redcard is not null;
```

the player with the highest number of yellow card booking

```
select * from player where playerId in ( select playerId , max (yellowcard) from can_belongMatch) ;
```
